EDUCATION

Sai Gon University

B.E. in Information Technology (3rd Year Student)

Expected Graduation: 2027

Current GPA: 3.2 / 4.0

SKILLS

Frontend: C/C++, PHP, HTML/CSS, JavaScript

Backend: Java, Object-Oriented Programming (OOP)

Database: MySQL, PostgreSQL, SQL

Tools: Git/ GitHub, IntelliJ IDEA, VS Code, Eclipse

PROJECTS

BusMap Admin System | *Next.js, Node.js, Python, MySQL, Socket.IO, Google Maps API*

2025

- Developed an administrative dashboard for managing and monitoring a school bus transportation system.
- Built the frontend using Next.js with modular components and CSS Modules to manage schedules, drivers, routes, and system statistics.
- Implemented backend services with Node.js and Express to handle APIs for bus routes, driver assignments, and scheduling management.
- Designed and integrated a MySQL database to store transportation data including buses, routes, drivers, and trip schedules.
- Implemented real-time bus tracking using Socket.IO to receive location updates from driver devices and broadcast them to admin dashboards.
- Integrated Google Maps API to visualize bus routes and live vehicle locations on an interactive map interface.
- Developed a Python-based optimization module to cluster up to 500 addresses and calculate efficient bus routing for each cluster.
- Designed reusable UI components such as tables, forms, pagination controls, and search modules to improve usability and maintainability.
- Used RESTful APIs and Axios for frontend-backend communication and environment configuration using dotenv.
- Collaborated in a team environment using Git and GitHub for version control and project management.

Tour Management System | *Java, MySQL, Git, IntelliJ IDEA*

2024

- Developed a desktop-based travel tour management system using Java to assist administrators in managing tour operations efficiently.
- Designed and implemented modules for managing tour information including creating, updating, deleting, and viewing tour details.
- Built a customer management module to store and maintain participant information such as personal details and booking history.
- Implemented service management features to handle additional services associated with tours such as transportation and accommodations.
- Developed a booking system allowing customers to reserve tours and enabling administrators to track booking records and customer participation.
- Designed and integrated a relational database using MySQL to manage data related to tours, customers, services, and reservations.
- Applied Object-Oriented Programming (OOP) principles such as encapsulation and modular design to improve maintainability and scalability.
- Collaborated in a team-based development environment and used Git/GitHub for version control and project collaboration.
- Tested and debugged application functionalities to ensure system stability and accurate data processing.
